

Email Setup Sheet

Everything needed to provision email, in the order the forms ask for it. Every value below is final — nothing left to substitute. Copy and paste as-is.

Principal: **Trevor Jones**. Entity: **Glass House Gardens Inc.** Domains registered **28 August 2026**, so the 14-day aging window closes **11 September 2026**.

Business details (used by both signups)

Business name:	Shortlist AIO
Legal entity:	Glass House Gardens Inc.
Address:	40 Essex Drive
City:	Steinbach
Province:	Manitoba (MB)
Postal code:	R5G 2Y6
Country:	Canada
Employees:	1 (just me / 1-9)
Primary domain:	shortlistaio.com

Part 1 — Google Workspace (brand mailbox)

Go to: <https://workspace.google.com/business/signup/welcome>

Choose **Business Starter** — **\$8/user/month**. One seat only.

Signup form

Business name:	Shortlist AIO
Number of employees:	Just you
Region:	Canada
First name:	Trevor
Last name:	Jones
Current email address:	(your existing personal address)
Domain:	Yes, I have a domain
Domain name:	shortlistaio.com
Username:	trevor
Full new address:	trevor@shortlistaio.com

After signup: verify the domain

Google gives you a TXT record. In Namecheap: **Domain List** → **shortlistaio.com** → **Manage** → **Advanced DNS** → **Add New Record**

```
Type:  TXT Record
Host:  @
Value: google-site-verification=XXXXXXX (Google supplies this)
TTL:   Automatic
```

Then: MX records for shortlistaio.com

Delete any existing MX records first (Namecheap adds parking records by default and they will silently break delivery). Also set **Mail Settings** to *Custom MX* rather than Namecheap's email forwarding.

```
Type: MX Record  Host: @  Value: smtp.google.com  Priority: 1  TTL: Automatic
```

That single record is Google's current recommendation. If the interface rejects it, the legacy five-record set also works:

```
MX @ aspmx.l.google.com      Priority 1
MX @ alt1.aspmx.l.google.com Priority 5
MX @ alt2.aspmx.l.google.com Priority 5
MX @ alt3.aspmx.l.google.com Priority 10
MX @ alt4.aspmx.l.google.com Priority 10
```

Then: SPF and DMARC for shortlistaio.com

```
Type: TXT Record  Host: @      Value: v=spf1 include:_spf.google.com ~all
Type: TXT Record  Host: _dmarc  Value: v=DMARC1; p=none; rua=mailto:dmarc@shortlistaio.com; fo=1; adkim=r; aspf=r
```

DKIM is generated inside the Google Admin console, not here: **Admin** → **Apps** → **Google Workspace** → **Gmail** → **Authenticate email** → **Generate new record** (choose 2048-bit). It gives you a TXT record with host `google._domainkey` — add that in Namecheap the same way.

Free aliases — add these after the mailbox exists

Admin → **Directory** → **Users** → **Trevor** → **User information** → **Email aliases**

```
hello@shortlistaio.com
privacy@shortlistaio.com
dmarc@shortlistaio.com
billing@shortlistaio.com
support@shortlistaio.com
```

All five deliver into the one paid mailbox. No extra cost.

Part 2 — Sending infrastructure (16 mailboxes)

Go to: <https://maildoso.com>

Sign up, then add the eight sending domains. Most providers in this category let you paste a list and will set DNS automatically if you delegate nameservers — **do not delegate the brand domain**, only these eight.

The eight sending domains

```
getshortlistaio.com
tryshortlistaio.com
useshortlistaio.com
goshortlistaio.com
joinshortlistaio.com
withshortlistaio.com
shortlistaiohq.com
shortlistaioteam.com
```

The sixteen mailboxes — two per domain

```
trevor@getshortlistaio.com
trevor.jones@getshortlistaio.com
trevor@tryshortlistaio.com
trevor.jones@tryshortlistaio.com
trevor@useshortlistaio.com
trevor.jones@useshortlistaio.com
trevor@goshortlistaio.com
trevor.jones@goshortlistaio.com
trevor@joinshortlistaio.com
trevor.jones@joinshortlistaio.com
trevor@withshortlistaio.com
trevor.jones@withshortlistaio.com
trevor@shortlistaiohq.com
trevor.jones@shortlistaiohq.com
trevor@shortlistaioteam.com
trevor.jones@shortlistaioteam.com
```

Display name and signature — same on every mailbox

Display name: Trevor Jones

Trevor Jones
Shortlist AIO
shortlistaio.com

Glass House Gardens Inc. o/a Shortlist AIO
40 Essex Drive, Steinbach, MB R5G 2Y6, Canada

Don't want to hear from me? Reply "no thanks" and I'll remove you.

The postal address is a CAN-SPAM requirement on every commercial message, not a nicety. The opt-out line must work: honour it within 10 business days, and in practice immediately.

Note: use "o/a Shortlist AIO" only once the Manitoba business name registration is filed. Until then, write Glass House Gardens Inc. alone.

Settings to confirm at the provider

Warmup:	ON, all 16 mailboxes, starting immediately
Daily send limit:	15 per mailbox (hard cap)
Open tracking:	OFF
Click tracking:	OFF
Custom tracking domain:	none

Open and click tracking **off** is deliberate and is what the published privacy policy says. Several providers default them on — check.

Part 3 — Verify before any real send

Run this once DNS has propagated (allow up to 24 hours, usually far less).

- ☐ Exactly **one** SPF record per domain; two is a permanent failure
- ☐ DKIM verifies; 2048-bit
- ☐ DMARC present, and **SPF and DKIM both align** with the From domain
- ☐ Namecheap parking MX records deleted from shortlistaio.com
- ☐ Namecheap email forwarding disabled on shortlistaio.com
- ☐ Every sending domain registered with Google Postmaster Tools and Microsoft SNDS
- ☐ Send a seed test to Gmail, Outlook and Yahoo — confirm **inbox**, not Promotions or Junk
- ☐ mail-tester.com score 9+/10

Free checks: <https://mxtoolbox.com/SuperTool.aspx> and <https://www.mail-tester.com>

What not to do

- **No sending from** shortlistaio.com. Ever. It carries contracts and

invoices; the eight sending domains are consumable, it is not.

- **No** info@, sales@, team@ **or** noreply@ on sending mailboxes.
- **Do not skip warmup** even though the domains are new and clean. Fourteen

days of aging, thirty days of ramp, no exceptions.

- **Do not exceed 15/day per mailbox** during month one.
